FDS S2 Week 9/10 Workshop
Project presentation

As stated in the FDS final project description, a presentation in a week 9 or week 10 workshop is an essential requirement for your project, but we will not mark the quality of the presentation – just whether you are present.

The overall aim of this workshop is to help you make progress on your project. It will give you an opportunity to:

- reflect and report on progress made;
- get comments on your work so far;
- share any difficulties encountered.

Format of workshop
- **Remember to bring an USB-C to HDMI connector!** The only connectors available in the room are HDMI and VGA.
- Timing. Individuals: 2 mins, Pairs: 3 mins. Groups of 3: 4 mins. Comments from tutor after each presentation.
- We suggest you create the following slides:
    o Progress made
    o Up to 3 visualisations, depending on size of group (suggested 1 for individuals, 2 for pairs and 3 for groups of 3)
    o Preliminary conclusion
    o A challenge encountered
- Please keep a note of any questions or challenges, Tutors will be circulating to address them.

The presentation and good scholarly conduct
The presentation reflects the fact that in many real-world situations, work is collaborative. We are keen for you to share general ideas via slides and visualisations, but please don't share chunks of code of paragraphs of text.

From the point of view of Good Scholarly Conduct, the presentations count as discussions with students at a general level. The Good Scholarly Conduct page states:

> "It is acceptable to use general ideas picked up, for example, in discussion with others, or in textbooks, without acknowledgement. In general, if you write the work you submit, in its entirety, yourself then you do not need to include an acknowledgement. An exception is when a really pivotal idea comes from an external source, in which case you should acknowledge that source."

Therefore, if you do pick up a really important idea from another student or group, you should acknowledge them in your report. We will not mark you down for originality for doing so. However, you will have to verify the idea by coding and visualising it yourself, and your write-up must be your own.
